

Guideline implementation dictionary and rule-change controls

Synthetic document facsimile - prepared for demonstration only.

Document / version	Record date	Owner / status
O03 / 1.0	2026-09-04	FI PC / current

O03§1 | Field semantics

TOB_PROD_REV_PCT: annual tobacco-production revenue percentage at the selected issuer mapping level.
COAL_EXTRACT_REV_PCT: thermal-coal extraction revenue percentage. COAL_POWER_REV_PCT is a different field; extraction cannot stand in for generation. Missing provider values must remain null.

O03§2 | Interpretation required

Legal and FI PC must confirm activity definition, threshold operator, denominator, issuer/parent scope, provider, as-of date, missing-data behavior, passive breaches and any exemptions. Prior implementation code is evidence of one client interpretation, not a current instruction.

O03§3 | Candidate validation

Test below, at and above each threshold; missing and stale data; direct and parent mappings; and corporate/sovereign scope. Draft pseudocode is not native CSTAR code and cannot be loaded without review. This demo uses a proposed >30-calendar-day stale-data review threshold solely as an example for approval.

Evidence provenance

Source record: O03; original format: Rule dictionary. The numbered passages preserve the existing demo corpus. PDF formatting does not grant additional authority to a draft, prior-client precedent or archived record.
