

Transition and derivatives readiness note

Synthetic document facsimile - prepared for demonstration only.

Document / version	Record date	Owner / status
O04 / 1.0	2026-09-07	Investment Operations / current

O04§1 | Parallel preparation

Request indicative holdings and data-quality fields during intake. Obtain Legal/FI PC interpretation before a definitive exclusion screen. Custody and market-access work may proceed in parallel, but unresolved securities must have a client-approved disposition.

O04§2 | Derivatives dependency

FX forwards and rate futures require relevant documentation, counterparty/broker and operational readiness. A staged bond-only plan is an option only if PM and client accept the investment implications and enforceable controls prevent premature activation.

O04§3 | Schedule use

Case-study rework days measure workstream effort or elapsed remediation in the source record, not additive launch delay. Build an owner-reviewed dependency plan. Without current capacity, external response times and dated readiness evidence, no calibrated launch-date prediction is supported.

Evidence provenance

Source record: O04; original format: Operating note. The numbered passages preserve the existing demo corpus. PDF formatting does not grant additional authority to a draft, prior-client precedent or archived record.
