

Aster Pension Foundation - exception or preventive-action record

Synthetic document facsimile - prepared for demonstration only.

Document / version	Record date	Owner / status
H06-E / 1.0	2026-03-26	Historical GCS Operations / historical

H06-E§1 | Observed event

Missing transfer classifications caused six business days of rework. Reporting rework was seven and derivative setup rework was twelve; activities overlapped.

H06-E§2 | Risk mechanism

A compressed launch exposed reporting-cycle and custody-data dependencies.

H06-E§3 | Outcome coding

Synthetic recorded workstream rework, in business days: reporting=7; guidelines=not applicable; transfer=6; derivatives=12; benchmark=5. Zero means no recorded rework in this closed case; it is not a universal absence of risk. Workstream intervals can overlap.

Evidence provenance

Source record: H06-E; original format: Case record. The numbered passages preserve the existing demo corpus. PDF formatting does not grant additional authority to a draft, prior-client precedent or archived record.
