Subject	Clarification: exclusion policy for SA-2026-0142

Client clarification

For the contractual schedule, tobacco production is excluded at greater than or equal to 5% of total issuer revenue. For thermal coal, we mean extraction revenue greater than or equal to 10%; we are not requesting a separate coal-power generation threshold in this schedule.

Apply the tests to directly held corporate securities using the approved issuer-parent mapping and Demo ESG Dataset version 2026-09. Indirect fund exposure is outside this draft rule and would require a separate decision. Missing, unmapped or stale observations require review before purchase or transfer; do not assume zero exposure.

Data must be refreshed for go-live. For this synthetic scenario, the agreed freshness threshold is 30 calendar days at screening. Actual thresholds and licensed providers must be agreed by the appropriate teams.

Next approval

Please prepare the revised schedule for our approval. This email clarifies intent but does not execute the IMA. Legal owns contractual language; FI PC owns the rule interpretation and approves implementation after boundary testing.

Draft candidate language

No purchase or transfer of a direct corporate security where tobacco-production revenue is $\geq 5\%$ or thermal-coal extraction revenue is $\geq 10\%$, measured at the approved issuer-parent level. Missing, unmapped or >30 -day-old data requires manual review and blocks release pending disposition.
